

Virtual GPU Software R460 for Red Hat Enterprise Linux with KVM

Release Notes

Table of Contents

Chapter 1. Release Notes.....	1
1.1. NVIDIA vGPU Software Driver Versions.....	1
1.2. Compatibility Requirements for the NVIDIA vGPU Manager and Guest VM Driver.....	2
1.3. Updates in Release 12.2.....	3
1.4. Updates in Release 12.1.....	4
1.5. Updates in Release 12.0.....	4
Chapter 2. Validated Platforms.....	5
2.1. Supported NVIDIA GPUs and Validated Server Platforms.....	5
2.1.1. Switching the Mode of a GPU that Supports Multiple Display Modes.....	6
2.1.2. Switching the Mode of a Tesla M60 or M6 GPU.....	7
2.2. Hypervisor Software Releases.....	7
2.3. Guest OS Support.....	9
2.3.1. Windows Guest OS Support.....	9
2.3.2. Linux Guest OS Support.....	10
2.4. NVIDIA CUDA Toolkit Version Support.....	11
2.5. Multiple vGPU Support.....	12
2.6. Peer-to-Peer CUDA Transfers over NVLink Support.....	14
2.7. GPUDirect Technology Support.....	16
2.8. NVIDIA NVSwitch On-Chip Memory Fabric Support.....	17
2.9. Since 12.2: Unified Memory Support.....	17
2.10. NVIDIA GPU Operator Support.....	18
Chapter 3. Known Product Limitations.....	20
3.1. Issues occur when the channels allocated to a vGPU are exhausted.....	20
3.2. Virtual GPU hot plugging is not supported.....	21
3.3. Total frame buffer for vGPUs is less than the total frame buffer on the physical GPU....	21
3.4. Issues may occur with graphics-intensive OpenCL applications on vGPU types with limited frame buffer.....	22
3.5. In pass through mode, all GPUs connected to each other through NVLink must be assigned to the same VM.....	23
3.6. vGPU profiles with 512 Mbytes or less of frame buffer support only 1 virtual display head on Windows 10.....	23
3.7. NVENC requires at least 1 Gbyte of frame buffer.....	24
3.8. VM running an incompatible NVIDIA vGPU guest driver fails to initialize vGPU when booted.....	24
3.9. Single vGPU benchmark scores are lower than pass-through GPU.....	25
3.10. nvidia-smi fails to operate when all GPUs are assigned to GPU pass-through mode....	26

Chapter 4. Resolved Issues.....27

Chapter 5. Known Issues.....28

5.1. 12.0 Only: Sessions freeze when Adobe Premiere with the Adobe Mercury Engine is used.....28

5.2. 12.0 Only: Issues occur when Blackmagic Design DaVinci Resolve is used.....28

5.3. 12.0, 12.1 Only: Rebooting a Windows 10 vGPU VM causes a host crash.....29

5.4. NVIDIA A100 HGX 80GB vGPU names shown as Graphics Device by nvidia-smi.....29

5.5. Idle Teradici Cloud Access Software session disconnects from Linux VM.....30

5.6. GPU Operator doesn't support vGPU on GPUs based on architectures before NVIDIA Turing.....31

5.7. Idle NVIDIA A100, NVIDIA A40, and NVIDIA A10 GPUs show 100% GPU utilization.....31

5.8. Guest VM frame buffer listed by nvidia-smi for vGPUs on GPUs that support SRIOV is incorrect.....32

5.9. VMs fail to boot on RHV 4.4.....33

5.10. Driver upgrade in a Linux guest VM with multiple vGPUs might fail.....34

5.11. NVIDIA Control Panel fails to start if launched too soon from a VM without licensing information.....35

5.12. Remoting solution session freezes with VGPU message 21 failed and VGPU message 14 failed errors.....35

5.13. On Linux, the frame rate might drop to 1 after several minutes.....36

5.14. DWM crashes randomly occur in Windows VMs.....37

5.15. Publisher not verified warning during Windows 7 driver installation.....37

5.16. RAPIDS cuDF merge fails on NVIDIA vGPU.....38

5.17. ECC memory settings for a vGPU cannot be changed by using NVIDIA X Server Settings38

5.18. Changes to ECC memory settings for a Linux vGPU VM by nvidia-smi might be ignored39

5.19. Vulkan applications crash in Windows 7 guest VMs configured with NVIDIA vGPU.....40

5.20. Host core CPU utilization is higher than expected for moderate workloads.....40

5.21. Frame capture while the interactive logon message is displayed returns blank screen.41

5.22. RDS sessions do not use the GPU with some Microsoft Windows Server releases.....42

5.23. When the scheduling policy is fixed share, GPU utilization is reported as higher than expected.....42

5.24. License is not acquired in Windows VMs.....43

5.25. nvidia-smi reports that vGPU migration is supported on all hypervisors.....44

5.26. Hot plugging and unplugging vCPUs causes a blue-screen crash in Windows VMs.....45

5.27. Luxmark causes a segmentation fault on an unlicensed Linux client.....45

5.28. A segmentation fault in DBus code causes nvidia-gridd to exit on Red Hat Enterprise Linux and CentOS.....46

5.29. No Manage License option available in NVIDIA X Server Settings by default.....46

5.30. Licenses remain checked out when VMs are forcibly powered off.....47

5.31. VM bug checks after the guest VM driver for Windows 10 RS2 is installed..... 48

5.32. GNOME Display Manager (GDM) fails to start on Red Hat Enterprise Linux 7.2 and
CentOS 7.0..... 49

Chapter 1. Release Notes

These *Release Notes* summarize current status, information on validated platforms, and known issues with NVIDIA vGPU software and associated hardware on Red Hat Enterprise Linux with KVM.

Note: The most current version of the documentation for this release of NVIDIA vGPU software can be found online at [NVIDIA Virtual GPU Software Documentation](#).

1.1. NVIDIA vGPU Software Driver Versions

Each release in this release family of NVIDIA vGPU software includes a specific version of the NVIDIA Virtual GPU Manager, NVIDIA Windows driver, and NVIDIA Linux driver.

NVIDIA vGPU Software Version	NVIDIA Virtual GPU Manager Version	NVIDIA Windows Driver Version	NVIDIA Linux Driver Version
12.2	460.73.02	462.31	460.73.01
12.1	460.32.04	461.33	460.32.03
12.0	460.32.04	461.09	460.32.03

For details of which Red Hat Enterprise Linux with KVM releases are supported, see [Hypervisor Software Releases](#).

1.2. Compatibility Requirements for the NVIDIA vGPU Manager and Guest VM Driver

The releases of the NVIDIA vGPU Manager and guest VM drivers that you install must be compatible. If you install the wrong guest VM driver release for the release of the vGPU Manager that you are using, the NVIDIA vGPU fails to load.

See [VM running an incompatible NVIDIA vGPU guest driver fails to initialize vGPU when booted.](#)

Note: This requirement does not apply to the NVIDIA vGPU software license server. All releases in this release family of NVIDIA vGPU software are compatible with **all** releases of the license server.

Compatible NVIDIA vGPU Manager and Guest VM Driver Releases

The following combinations of NVIDIA vGPU Manager and guest VM driver releases are compatible with each other.

- ▶ NVIDIA vGPU Manager with guest VM drivers from the same release
- ▶ NVIDIA vGPU Manager with guest VM drivers from different releases within the same major release branch
- ▶ NVIDIA vGPU Manager from a later major release branch with guest VM drivers from the previous branch

Note:

When NVIDIA vGPU Manager is used with guest VM drivers from a different release within the same branch or from the previous branch, the combination supports **only** the features, hardware, and software (including guest OSes) that are supported on both releases.

For example, if vGPU Manager from release 12.2 is used with guest drivers from release 11.2, the combination does **not** support Red Hat Enterprise Linux 7.6 because NVIDIA vGPU software release 12.2 does not support Red Hat Enterprise Linux 7.6.

The following table lists the specific software releases that are compatible with the components in the NVIDIA vGPU software 12 major release branch.

NVIDIA vGPU Software Component	Releases	Compatible Software Releases
NVIDIA vGPU Manager	12.0 through 12.2	<ul style="list-style-type: none"> ▶ Guest VM driver releases 12.0 through 12.2 ▶ All guest VM driver 11.x releases

NVIDIA vGPU Software Component	Releases	Compatible Software Releases
Guest VM drivers	12.0 through 12.2	NVIDIA vGPU Manager releases 12.0 through 12.2

Incompatible NVIDIA vGPU Manager and Guest VM Driver Releases

The following combinations of NVIDIA vGPU Manager and guest VM driver releases are incompatible with each other.

- ▶ NVIDIA vGPU Manager from a later major release branch with guest VM drivers from two or more major releases before the release of the vGPU Manager
- ▶ NVIDIA vGPU Manager from an earlier major release branch with guest VM drivers from a later branch

The following table lists the specific software releases that are incompatible with the components in the NVIDIA vGPU software 12 major release branch.

NVIDIA vGPU Software Component	Releases	Incompatible Software Releases
NVIDIA vGPU Manager	12.0 through 12.2	All guest VM driver releases 10.x and earlier
Guest VM drivers	12.0 through 12.2	All NVIDIA vGPU Manager releases 11.x and earlier

1.3. Updates in Release 12.2

New Features in Release 12.2

- ▶ Support for unified memory with NVIDIA vGPU
- ▶ Security updates - see [Security Bulletin: NVIDIA GPU Display Driver - April 2021](#)
- ▶ Miscellaneous bug fixes

Hardware and Software Support Introduced in Release 12.2

- ▶ Support for the following GPUs:
 - ▶ NVIDIA® A10
 - ▶ NVIDIA RTX A5000
- ▶ Support for NVIDIA GPU Operator with Red Hat Enterprise Linux with KVM 8.2, Red Hat OpenShift 4.7, and Red Hat CoreOS 4.7

1.4. Updates in Release 12.1

New Features in Release 12.1

- ▶ Miscellaneous bug fixes

1.5. Updates in Release 12.0

New Features in Release 12.0

- ▶ Support for NVIDIA[®] GPU Operator
- ▶ Support for NVIDIA[®] NVSwitch[™] on-chip memory fabric
- ▶ Miscellaneous bug fixes

Hardware and Software Support Introduced in Release 12.0

- ▶ Support for the following GPUs:
 - ▶ NVIDIA A100 HGX 80GB
 - ▶ NVIDIA A40
 - ▶ NVIDIA RTX A6000
- ▶ Support for Windows 10 October 2020 Update (20H2) as a guest OS
- ▶ Support for Red Hat CoreOS 4.7 as a guest OS

Chapter 2. Validated Platforms

This release family of NVIDIA vGPU software provides support for several NVIDIA GPUs on validated server hardware platforms, Red Hat Enterprise Linux with KVM hypervisor software versions, and guest operating systems. It also supports the version of NVIDIA CUDA Toolkit that is compatible with R460 drivers.

2.1. Supported NVIDIA GPUs and Validated Server Platforms

This release of NVIDIA vGPU software provides support for the following NVIDIA GPUs on Red Hat Enterprise Linux with KVM, running on validated server hardware platforms:

- ▶ GPUs based on the NVIDIA Maxwell™ graphic architecture:
 - ▶ Tesla M6 (NVIDIA Virtual Compute Server (vCS) is **not** supported.)
 - ▶ Tesla M10 (vCS is **not** supported.)
 - ▶ Tesla M60 (vCS is **not** supported.)
- ▶ GPUs based on the NVIDIA Pascal™ architecture:
 - ▶ Tesla P4
 - ▶ Tesla P6
 - ▶ Tesla P40
 - ▶ Tesla P100 PCIe 16 GB
 - ▶ Tesla P100 SXM2 16 GB
 - ▶ Tesla P100 PCIe 12GB
- ▶ GPUs based on the NVIDIA Volta architecture:
 - ▶ Tesla V100 SXM2
 - ▶ Tesla V100 SXM2 32GB
 - ▶ Tesla V100 PCIe
 - ▶ Tesla V100 PCIe 32GB
 - ▶ Tesla V100S PCIe 32GB

- ▶ Tesla V100 FHHH
- ▶ GPUs based on the NVIDIA Turing™ architecture:
 - ▶ Tesla T4
 - ▶ Quadro RTX 6000 in displayless mode
 - ▶ Quadro RTX 6000 passive in displayless mode
 - ▶ Quadro RTX 8000 in displayless mode
 - ▶ Quadro RTX 8000 passive in displayless mode

In displayless mode, local physical display connectors are disabled.

- ▶ GPUs based on the NVIDIA Ampere architecture:
 - ▶ NVIDIA A100 HGX 80GB (supports **only** compute workloads on Linux with NVIDIA Virtual Compute Server and GPU pass through; graphics acceleration is **not** supported)
 - ▶ NVIDIA A100 PCIe 40GB (supports **only** compute workloads on Linux with NVIDIA Virtual Compute Server and GPU pass through; graphics acceleration is **not** supported)
 - ▶ NVIDIA A100 HGX 40GB (supports **only** compute workloads on Linux with NVIDIA Virtual Compute Server and GPU pass through; graphics acceleration is **not** supported)
 - ▶ NVIDIA A40 in displayless mode
 - ▶ **Since 12.2:** NVIDIA A10
 - ▶ NVIDIA RTX A6000 in displayless mode
 - ▶ **Since 12.2:** NVIDIA RTX A5000 in displayless mode

In displayless mode, local physical display connectors are disabled.

For a list of validated server platforms, refer to [NVIDIA GRID Certified Servers](#).

2.1.1. Switching the Mode of a GPU that Supports Multiple Display Modes

Some GPUs support displayless and display-enabled modes but must be used in NVIDIA vGPU software deployments in displayless mode.

The GPUs listed in the following table support multiple display modes. As shown in the table, some GPUs are supplied from the factory in displayless mode but other GPUs are supplied in a display-enabled mode.

GPU	Mode as Supplied from the Factory
NVIDIA A40	Displayless
NVIDIA RTX A5000	Display enabled
NVIDIA RTX A6000	Display enabled

A GPU that is supplied from the factory in displayless mode, such as the NVIDIA A40 GPU, might be in a display-enabled mode if its mode has previously been changed.

To change the mode of a GPU that supports multiple display modes, use the `displaymodeselector` tool, which you can request from the [NVIDIA Display Mode Selector Tool](#) page on the NVIDIA Developer website.

**Note:**

Only the following GPUs support the `displaymodeselector` tool:

- ▶ NVIDIA A40
- ▶ NVIDIA RTX A5000
- ▶ NVIDIA RTX A6000

Other GPUs that support NVIDIA vGPU software do not support the `displaymodeselector` tool and, unless otherwise stated, do not require display mode switching.

2.1.2. Switching the Mode of a Tesla M60 or M6 GPU

Tesla M60 and M6 GPUs support compute mode and graphics mode. NVIDIA vGPU requires GPUs that support both modes to operate in graphics mode.

Recent Tesla M60 GPUs and M6 GPUs are supplied in graphics mode. However, your GPU might be in compute mode if it is an older Tesla M60 GPU or M6 GPU, or if its mode has previously been changed.

To configure the mode of Tesla M60 and M6 GPUs, use the `gpumodeswitch` tool provided with NVIDIA vGPU software releases. If you are unsure which mode your GPU is in, use the `gpumodeswitch` tool to find out the mode.

**Note:**

Only Tesla M60 and M6 GPUs support the `gpumodeswitch` tool. Other GPUs that support NVIDIA vGPU do not support the `gpumodeswitch` tool and, unless otherwise stated, do not require mode switching.

Even in compute mode, Tesla M60 and M6 GPUs do **not** support NVIDIA Virtual Compute Server vGPU types.

For more information, see [gpumodeswitch User Guide](#).

2.2. Hypervisor Software Releases

This release supports **only** the hypervisor software releases listed in the table.

Note: If a specific release, even an update release, is not listed, it's **not** supported.

Software	Releases Supported	Notes
Red Hat Enterprise Linux with KVM	8.3, 8.2	All NVIDIA GPUs that NVIDIA vGPU software supports are supported with vGPU and in pass-through mode.

Software	Releases Supported	Notes
Red Hat Enterprise Linux with KVM	8.1	<p>The following GPUs are supported in GPU pass through mode only:</p> <ul style="list-style-type: none"> ▶ NVIDIA RTX A6000 ▶ NVIDIA RTX A5000 ▶ NVIDIA A40 ▶ NVIDIA A10 ▶ NVIDIA A100 HGX 80GB ▶ NVIDIA A100 PCIe 40GB ▶ NVIDIA A100 HGX 40GB <p>All other NVIDIA GPUs that NVIDIA vGPU software supports are supported with vGPU and in pass-through mode.</p>
Red Hat Enterprise Linux with KVM	7.9, 7.8, 7.7	<p>The following GPUs are supported in GPU pass through mode only:</p> <ul style="list-style-type: none"> ▶ NVIDIA RTX A6000 ▶ NVIDIA RTX A5000 ▶ NVIDIA A40 ▶ NVIDIA A10 ▶ NVIDIA A100 HGX 80GB ▶ NVIDIA A100 PCIe 40GB ▶ NVIDIA A100 HGX 40GB <p>All other NVIDIA GPUs that NVIDIA vGPU software supports are supported with vGPU and in pass-through mode.</p>
Red Hat Virtualization (RHV)	4.4	<p>The following GPUs are supported in GPU pass through mode only:</p> <ul style="list-style-type: none"> ▶ NVIDIA A100 HGX 80GB ▶ NVIDIA A100 PCIe 40GB ▶ NVIDIA A100 HGX 40GB <p>All other NVIDIA GPUs that NVIDIA vGPU software supports are supported with vGPU and in pass-through mode.</p>
Red Hat Virtualization (RHV)	4.3, 4.2	<p>Not supported on the following GPUs:</p> <ul style="list-style-type: none"> ▶ NVIDIA RTX A6000 ▶ NVIDIA RTX A5000 ▶ NVIDIA A40

Software	Releases Supported	Notes
		<ul style="list-style-type: none"> ▶ NVIDIA A10 <p>The following GPUs are supported in GPU pass through mode only:</p> <ul style="list-style-type: none"> ▶ NVIDIA A100 HGX 80GB ▶ NVIDIA A100 PCIe 40GB ▶ NVIDIA A100 HGX 40GB <p>All other NVIDIA GPUs that NVIDIA vGPU software supports are supported with vGPU and in pass-through mode.</p>

2.3. Guest OS Support

NVIDIA vGPU software supports several Windows releases and Linux distributions as a guest OS. The supported guest operating systems depend on the hypervisor software version.

Note:

Use only a guest OS release that is listed as supported by NVIDIA vGPU software with your virtualization software. To be listed as supported, a guest OS release must be supported not only by NVIDIA vGPU software, but also by your virtualization software. NVIDIA **cannot** support guest OS releases that your virtualization software does not support.

NVIDIA vGPU software supports **only** 64-bit guest operating systems. No 32-bit guest operating systems are supported.

2.3.1. Windows Guest OS Support

Note: Red Hat Enterprise Linux with KVM and Red Hat Virtualization (RHV) support Windows guest operating systems only under specific Red Hat subscription programs. For details, see:

- ▶ [Certified guest operating systems for Red Hat Enterprise Linux with KVM](#)
- ▶ [Certified Guest Operating Systems in Red Hat OpenStack Platform and Red Hat Enterprise Virtualization](#)

NVIDIA vGPU software supports **only** the 64-bit Windows releases listed in the table as a guest OS on Red Hat Enterprise Linux with KVM. The releases of Red Hat Enterprise Linux with KVM for which a Windows release is supported depend on whether NVIDIA vGPU or pass-through GPU is used.

Note:

If a specific release, even an update release, is not listed, it's **not** supported.

Guest OS	NVIDIA vGPU - Red Hat Enterprise Linux with KVM Releases	Pass-Through GPU - Red Hat Enterprise Linux with KVM Releases
Windows Server 2019	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2
Windows Server 2016 1709, 1607	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2
Windows Server 2012 R2 (not supported on GPUs based on architectures after the NVIDIA Turing™ architecture)	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2
Windows 10 October 2020 Update (20H2) and all Windows 10 releases supported by Microsoft up to and including this release The hardware-accelerated GPU scheduling feature introduced in Windows 10 May 2020 Update (2004) is not supported on GPUs based on the Maxwell architecture and is supported only in pass-through mode on GPUs based on later architectures.	RHV 4.4, 4.3, 4.2	RHV 4.4, 4.3, 4.2

2.3.2. Linux Guest OS Support

NVIDIA vGPU software supports **only** the 64-bit Linux distributions listed in the table as a guest OS on Red Hat Enterprise Linux with KVM. The releases of Red Hat Enterprise Linux with KVM for which a Linux release is supported depend on whether NVIDIA vGPU or pass-through GPU is used.

Note:

If a specific release, even an update release, is not listed, it's **not** supported.

Guest OS	NVIDIA vGPU - Red Hat Enterprise Linux with KVM Releases	Pass-Through GPU - Red Hat Enterprise Linux with KVM Releases
Red Hat CoreOS 4.7	RHEL KVM 8.2	RHEL KVM 8.2
Red Hat Enterprise Linux 8.3	RHEL KVM 8.3, 8.2, 8.1	RHEL KVM 8.3, 8.2, 8.1
Red Hat Enterprise Linux 8.2	RHEL KVM 8.3, 8.2, 8.1	RHEL KVM 8.3, 8.2, 8.1
Red Hat Enterprise Linux 8.1	RHEL KVM 8.3, 8.2, 8.1	RHEL KVM 8.3, 8.2, 8.1

Guest OS	NVIDIA vGPU - Red Hat Enterprise Linux with KVM Releases	Pass-Through GPU - Red Hat Enterprise Linux with KVM Releases
CentOS Linux 8 (1911)	RHEL KVM 8.3, 8.2, 8.1	RHEL KVM 8.3, 8.2, 8.1
CentOS 8.0	RHEL KVM 8.3, 8.2, 8.1	RHEL KVM 8.3, 8.2, 8.1
Red Hat Enterprise Linux 7.7-7.9	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2
CentOS 7.6-7.8 See Note [1]	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2
Red Hat Enterprise Linux 6.6	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2
CentOS 6.6 See Note [1]	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2	RHEL KVM 8.3, 8.2, 8.1, 7.9, 7.8, 7.7 RHV 4.4, 4.3, 4.2

**Note:**

1. CentOS is not a certified guest OS for Red Hat Enterprise Linux with KVM or RHV.

2.4. NVIDIA CUDA Toolkit Version Support

The releases in this release family of NVIDIA vGPU software support NVIDIA CUDA Toolkit 11.2.

For more information about NVIDIA CUDA Toolkit, see [CUDA Toolkit 11.2 Documentation](#).

**Note:**

If you are using NVIDIA vGPU software with CUDA on Linux, avoid conflicting installation methods by installing CUDA from a distribution-independent runfile package. Do not install CUDA from distribution-specific RPM or Deb package.

To ensure that the NVIDIA vGPU software graphics driver is not overwritten when CUDA is installed, deselect the CUDA driver when selecting the CUDA components to install.

For more information, see [NVIDIA CUDA Installation Guide for Linux](#).

2.5. Multiple vGPU Support

To support applications and workloads that are compute or graphics intensive, multiple vGPUs can be added to a single VM. The assignment of more than one vGPU to a VM is supported only on a subset of vGPUs and Red Hat Enterprise Linux with KVM releases.

Supported vGPUs

Only Q-series and C-series time-sliced vGPUs that are allocated all of the physical GPU's frame buffer are supported. MIG-backed vGPUs are **not** supported.

GPU Architecture	Board	vGPU
Ampere (compute workloads only)	NVIDIA A100 HGX 80GB	A100DX-80C See Note [1].
	NVIDIA A100 PCIe 40GB	A100-40C See Note [1].
	NVIDIA A100 HGX 40GB	A100X-40C See Note [1].
Ampere (compute and graphics workloads)	NVIDIA A40	A40-48Q See Note [1].
		A40-48C See Note [1].
	NVIDIA A10	A10-24Q See Note [1].
		A10-24C See Note [1].
	NVIDIA RTX A6000	A6000-48Q See Note [1].
		A6000-48C See Note [1].
	NVIDIA RTX A5000	A5000-24Q See Note [1].
		A5000-24C See Note [1].
Turing	Tesla T4	T4-16Q
		T4-16C
	Quadro RTX 6000	RTX6000-24Q
		RTX6000-24C
	Quadro RTX 6000 passive	RTX6000P-24Q
		RTX6000P-24C
	Quadro RTX 8000	RTX8000-48Q
		RTX8000-48C
	Quadro RTX 8000 passive	RTX8000P-48Q
		RTX8000P-48C

Tesla P4	P4-8Q	
	P4-8C	
Maxwell	Tesla M60	M60-8Q
	Tesla M10	M10-8Q
	Tesla M6	M6-8Q

**Note:**

1. This type of vGPU cannot be assigned with other types of vGPU to the same VM.

Maximum vGPUs per VM

NVIDIA vGPU software supports up to a maximum of 16 vGPUs per VM on Red Hat Enterprise Linux with KVM.

Supported Hypervisor Releases

Red Hat Enterprise Linux with KVM 8.3, 8.2, 8.1, 7.9, 7.8, and 7.7 only.

RHV 4.4, 4.3 and 4.2 only.

2.6. Peer-to-Peer CUDA Transfers over NVLink Support

Peer-to-peer CUDA transfers enable device memory between vGPUs on different GPUs that are assigned to the same VM to be accessed from within the CUDA kernels. NVLink is a high-bandwidth interconnect that enables fast communication between such vGPUs. Peer-to-Peer CUDA transfers over NVLink are supported only on a subset of vGPUs, Red Hat Enterprise Linux with KVM releases, and guest OS releases.

Supported vGPUs

Only Q-series and C-series time-sliced vGPUs that are allocated all of the physical GPU's frame buffer on physical GPUs that support NVLink are supported.

GPU Architecture	Board	vGPU
Ampere (compute workloads only)	NVIDIA A100 HGX 80GB	A100DX-80C See Note [1].
	NVIDIA A100 PCIe 40GB	A100-40C
	NVIDIA A100 HGX 40GB	A100X-40C See Note [1].
Ampere (compute and graphics workloads)	NVIDIA A40	A40-48Q
		A40-48C
	NVIDIA A10	A10-24Q
		A10-24C
	NVIDIA RTX A6000	A6000-48Q
		A6000-48C
	NVIDIA RTX A5000	A5000-24Q
		A5000-24C

	Quadro RTX 6000 passive	RTX6000P-24Q
		RTX6000P-24C
	Quadro RTX 8000	RTX8000-48Q
		RTX8000-48C

GPU Architecture	Board	vGPU
	Quadro RTX 8000 passive	RTX8000P-48Q
		RTX8000P-48C
Volta	Tesla V100 SXM2 32GB	V100DX-32Q
		V100DX-32C
	Tesla V100 SXM2	V100X-16Q
		V100X-16C
Pascal	Tesla P100 SXM2	P100X-16Q
		P100X-16C

**Note:**

1. Supported only on the following hardware:

- ▶ NVIDIA HGX™ A100 4-GPU baseboard with four fully connected GPUs
- ▶ NVIDIA HGX A100 8-GPU baseboards with eight fully connected GPUs

Supported Hypervisor Releases

Peer-to-Peer CUDA Transfers over NVLink are supported on all hypervisor releases that support the assignment of more than one vGPU to a VM. For details, see [Multiple vGPU Support](#).

Supported Guest OS Releases

Linux only. Peer-to-Peer CUDA Transfers over NVLink are **not** supported on Windows.

Limitations

- ▶ NVIDIA NVSwitch is supported only on the hardware platforms, vGPUs, and Red Hat Enterprise Linux with KVM releases listed in [NVIDIA NVSwitch On-Chip Memory Fabric Support](#). Otherwise, only direct connections are supported.
- ▶ Only time-sliced vGPUs are supported. MIG-backed vGPUs are **not** supported.
- ▶ PCIe is supported **only** with the NVIDIA A100 PCIe 40GB GPU. Otherwise, PCIe is not supported.
- ▶ SLI is not supported.

2.7. GPUDirect Technology Support

GPUDirect[®] technology remote direct memory access (RDMA) enables network devices to directly access vGPU frame buffer, bypassing CPU host memory altogether. GPUDirect technology is supported only on a subset of vGPUs and guest OS releases.

Supported vGPUs

Only C-series vGPUs that are allocated all of the physical GPU's frame buffer on physical GPUs based on the NVIDIA Ampere architecture are supported. Both time-sliced and MIG-backed vGPUs that meet these requirements are supported.

GPU Architecture	Board	vGPU
Ampere (time-sliced and MIG-backed vGPUs)	NVIDIA A100 HGX 80GB	A100DX-80C
		A100DX-7-80C
	NVIDIA A100 PCIe 40GB	A100-40C
		A100-7-40C
	NVIDIA A100 HGX 40GB	A100X-40C
		A100X-7-40C
Ampere (time-sliced vGPUs only)	NVIDIA A40	A40-48C
	NVIDIA A10	A10-24C
	NVIDIA RTX A6000	A6000-48C
	NVIDIA RTX A5000	A5000-24C

Supported Guest OS Releases

Linux only. GPUDirect technology is **not** supported on Windows.

Supported Network Interface Cards

GPUDirect technology RDMA is supported on the following network interface cards:

- ▶ Mellanox Connect-X[®] 6 SmartNIC
- ▶ Mellanox Connect-X 5 Ethernet adapter card

Limitations

Only GPUDirect technology RDMA is supported. GPUDirect technology storage is not supported.

2.8. NVIDIA NVSwitch On-Chip Memory Fabric Support

NVIDIA® NVSwitch™ on-chip memory fabric enables peer-to-peer vGPU communication within a single node over the NVLink fabric. NVSwitch on-chip memory fabric is supported only on a subset of hardware platforms, vGPUs, Red Hat Enterprise Linux with KVM releases, and guest OS releases.

For information about how to use the NVSwitch on-chip memory fabric, see [Fabric Manager for NVIDIA NVSwitch Systems User Guide \(PDF\)](#).

Supported Hardware Platforms

- ▶ NVIDIA HGX A100 8-GPU baseboard

Supported vGPUs

Only C-series time-sliced vGPUs that are allocated all of the physical GPU's frame buffer on NVIDIA A100 HGX physical GPUs are supported.

GPU Architecture	Board	vGPU
Ampere	NVIDIA A100 HGX 80GB	A100DX-80C
	NVIDIA A100 HGX 40GB	A100X-40C

Supported Hypervisor Releases

Red Hat Enterprise Linux with KVM 8.2 only.

Supported Guest OS Releases

Linux only. NVIDIA NVSwitch on-chip memory fabric is **not** supported on Windows.

Limitations

- ▶ Only time-sliced vGPUs are supported. MIG-backed vGPUs are **not** supported.
- ▶ PCIe is not supported.
- ▶ SLI is not supported.
- ▶ All vGPUs that are communicating peer-to-peer must be assigned to the same VM.

2.9. Since 12.2: Unified Memory Support

Unified memory is a single memory address space that is accessible from any CPU or GPU in a system. It creates a pool of managed memory that is shared between the CPU and GPU to provide a simple way to allocate and access data that can be used by code running on any CPU

or GPU in the system. Unified memory is supported only on a subset of vGPUs and guest OS releases.

Note: Unified memory is disabled by default. If used, you must enable unified memory individually for each vGPU that requires it by setting a vGPU plugin parameter.

Supported vGPUs

Only Q-series and C-series time-sliced vGPUs that are allocated all of the physical GPU's frame buffer on physical GPUs that support unified memory are supported.

GPU Architecture	Board	vGPU
Ampere	NVIDIA A40	A40-48Q
		A40-48C
	NVIDIA A10	A10-24Q
		A10-24C
	NVIDIA RTX A6000	A6000-48Q
		A6000-48C
	NVIDIA RTX A5000	A5000-24Q
		A5000-24C

Supported Guest OS Releases

Linux only. Unified memory is **not** supported on Windows.

Limitations

- ▶ Only time-sliced vGPUs are supported. MIG-backed vGPUs are **not** supported.

2.10. NVIDIA GPU Operator Support

NVIDIA GPU Operator simplifies the deployment of NVIDIA vGPU software with software container platforms on immutable operating systems. An immutable operating system does not allow the installation of the NVIDIA vGPU software graphics driver directly on the operating system. NVIDIA GPU Operator is supported only on specific combinations of Red Hat Enterprise Linux with KVM release, container platform, and guest OS release.

Red Hat Enterprise Linux with KVM Release	Container Platform	Guest OS
Since 12.2: Red Hat Enterprise Linux with KVM 8.2	Red Hat Openshift 4.7 with Red Hat Enterprise Linux CoreOS and the CRI-O container runtime	Red Hat CoreOS 4.7

Red Hat Enterprise Linux with KVM Release	Container Platform	Guest OS
Red Hat Enterprise Linux with KVM 8.2	Red Hat Openshift 4.6 with Red Hat Enterprise Linux CoreOS and the CRI-O container runtime	Red Hat CoreOS 4.6

Chapter 3. Known Product Limitations

Known product limitations for this release of NVIDIA vGPU software are described in the following sections.

3.1. Issues occur when the channels allocated to a vGPU are exhausted

Description

Issues occur when the channels allocated to a vGPU are exhausted and the guest VM to which the vGPU is assigned fails to allocate a channel to the vGPU. A physical GPU has a fixed number of channels and the number of channels allocated to each vGPU is inversely proportional to the maximum number of vGPUs allowed on the physical GPU.

When the channels allocated to a vGPU are exhausted and the guest VM fails to allocate a channel, the following errors are reported on the hypervisor host or in an NVIDIA bug report:

```
Jun 26 08:01:25 srvxen06f vgpu-3[14276]: error: vmiop_log: (0x0): Guest attempted to
allocate channel above its max channel limit 0xfb
Jun 26 08:01:25 srvxen06f vgpu-3[14276]: error: vmiop_log: (0x0): vGPU message 6
failed, result code: 0x1a
Jun 26 08:01:25 srvxen06f vgpu-3[14276]: error: vmiop_log: (0x0):
0xc1d004a1, 0xff0e0000, 0xff0400fb, 0xc36f,
Jun 26 08:01:25 srvxen06f vgpu-3[14276]: error: vmiop_log: (0x0):          0x1,
0xff1fe314, 0xff1fe038, 0x100b6f000, 0x1000,
Jun 26 08:01:25 srvxen06f vgpu-3[14276]: error: vmiop_log: (0x0):
0x80000000, 0xff0e0200, 0x0, 0x0, (Not logged),
Jun 26 08:01:25 srvxen06f vgpu-3[14276]: error: vmiop_log: (0x0):          0x1, 0x0
Jun 26 08:01:25 srvxen06f vgpu-3[14276]: error: vmiop_log: (0x0): , 0x0
```

Workaround

Use a vGPU type with more frame buffer, thereby reducing the maximum number of vGPUs allowed on the physical GPU. As a result, the number of channels allocated to each vGPU is increased.

3.2. Virtual GPU hot plugging is not supported

NVIDIA vGPU software does not support the addition of virtual function I/O (VFIO) mediated device (`mdev`) devices after the VM has been started by QEMU. All `mdev` devices must be added before the VM is started.

3.3. Total frame buffer for vGPUs is less than the total frame buffer on the physical GPU

Some of the physical GPU's frame buffer is used by the hypervisor on behalf of the VM for allocations that the guest OS would otherwise have made in its own frame buffer. The frame buffer used by the hypervisor is not available for vGPUs on the physical GPU. In NVIDIA vGPU deployments, frame buffer for the guest OS is reserved in advance, whereas in bare-metal deployments, frame buffer for the guest OS is reserved on the basis of the runtime needs of applications.

If error-correcting code (ECC) memory is enabled on a physical GPU that does not have HBM2 memory, the amount of frame buffer that is usable by vGPUs is further reduced. All types of vGPU are affected, not just vGPUs that support ECC memory.

On all GPUs that support ECC memory and, therefore, dynamic page retirement, additional frame buffer is allocated for dynamic page retirement. The amount that is allocated is inversely proportional to the maximum number of vGPUs per physical GPU. All GPUs that support ECC memory are affected, even GPUs that have HBM2 memory or for which ECC memory is disabled.

The approximate amount of frame buffer that NVIDIA vGPU software reserves can be calculated from the following formula:

$$\text{max-reserved-fb} = \text{vgpu-profile-size-in-mb} \div 16 + 16 + \text{ecc-adjustments} + \text{page-retirement-allocation}$$

max-reserved-fb

The maximum total amount of reserved frame buffer in Mbytes that is not available for vGPUs.

vgpu-profile-size-in-mb

The amount of frame buffer in Mbytes allocated to a single vGPU. This amount depends on the vGPU type. For example, for the T4-16Q vGPU type, `vgpu-profile-size-in-mb` is 16384.

ecc-adjustments

The amount of frame buffer in Mbytes that is not usable by vGPUs when ECC is enabled on a physical GPU that does not have HBM2 memory.

- ▶ If ECC is enabled on a physical GPU that does not have HBM2 memory *ecc-adjustments* is $fb-without-ecc/16$, which is equivalent to 64 Mbytes for every Gbyte of frame buffer assigned to the vGPU. *fb-without-ecc* is total amount of frame buffer with ECC disabled.
- ▶ If ECC is disabled or the GPU has HBM2 memory, *ecc-adjustments* is 0.

page-retirement-allocation

The amount of frame buffer in Mbytes that is reserved for dynamic page retirement.

- ▶ On GPUs based on the NVIDIA Maxwell GPU architecture, *page-retirement-allocation* = $4 \div max-vgpus-per-gpu$.
- ▶ On GPUs based on NVIDIA GPU architectures **after** the Maxwell architecture, *page-retirement-allocation* = $128 \div max-vgpus-per-gpu$

max-vgpus-per-gpu

The maximum number of vGPUs that can be created simultaneously on a physical GPU. This number varies according to the vGPU type. For example, for the T4-16Q vGPU type, *max-vgpus-per-gpu* is 1.

Note: In VMs running Windows Server 2012 R2, which supports Windows Display Driver Model (WDDM) 1.x, an additional 48 Mbytes of frame buffer are reserved and not available for vGPUs.

3.4. Issues may occur with graphics-intensive OpenCL applications on vGPU types with limited frame buffer

Description

Issues may occur when graphics-intensive OpenCL applications are used with vGPU types that have limited frame buffer. These issues occur when the applications demand more frame buffer than is allocated to the vGPU.

For example, these issues may occur with the Adobe Photoshop and LuxMark OpenCL Benchmark applications:

- ▶ When the image resolution and size are changed in Adobe Photoshop, a program error may occur or Photoshop may display a message about a problem with the graphics hardware and a suggestion to disable OpenCL.
- ▶ When the LuxMark OpenCL Benchmark application is run, XID error 31 may occur.

Workaround

For graphics-intensive OpenCL applications, use a vGPU type with more frame buffer.

3.5. In pass through mode, all GPUs connected to each other through NVLink must be assigned to the same VM

Description

In pass through mode, all GPUs connected to each other through NVLink must be assigned to the same VM. If a subset of GPUs connected to each other through NVLink is passed through to a VM, unrecoverable error `XID 74` occurs when the VM is booted. This error corrupts the NVLink state on the physical GPUs and, as a result, the NVLink bridge between the GPUs is unusable.

Workaround

Restore the NVLink state on the physical GPUs by resetting the GPUs or rebooting the hypervisor host.

3.6. vGPU profiles with 512 Mbytes or less of frame buffer support only 1 virtual display head on Windows 10

Description

To reduce the possibility of memory exhaustion, vGPU profiles with 512 Mbytes or less of frame buffer support only 1 virtual display head on a Windows 10 guest OS.

The following vGPU profiles have 512 Mbytes or less of frame buffer:

- ▶ Tesla M6-0B, M6-0Q
- ▶ Tesla M10-0B, M10-0Q
- ▶ Tesla M60-0B, M60-0Q

Workaround

Use a profile that supports more than 1 virtual display head and has at least 1 Gbyte of frame buffer.

3.7. NVENC requires at least 1 Gbyte of frame buffer

Description

Using the frame buffer for the NVIDIA hardware-based H.264/HEVC video encoder (NVENC) may cause memory exhaustion with vGPU profiles that have 512 Mbytes or less of frame buffer. To reduce the possibility of memory exhaustion, NVENC is disabled on profiles that have 512 Mbytes or less of frame buffer. Application GPU acceleration remains fully supported and available for all profiles, including profiles with 512 Mbytes or less of frame buffer. NVENC support from both Citrix and VMware is a recent feature and, if you are using an older version, you should experience no change in functionality.

The following vGPU profiles have 512 Mbytes or less of frame buffer:

- ▶ Tesla M6-0B, M6-0Q
- ▶ Tesla M10-0B, M10-0Q
- ▶ Tesla M60-0B, M60-0Q

Workaround

If you require NVENC to be enabled, use a profile that has at least 1 Gbyte of frame buffer.

3.8. VM running an incompatible NVIDIA vGPU guest driver fails to initialize vGPU when booted

Description

A VM running a version of the NVIDIA guest VM driver that is incompatible with the current release of Virtual GPU Manager will fail to initialize vGPU when booted on a Red Hat Enterprise Linux with KVM platform running that release of Virtual GPU Manager.

A guest VM driver is incompatible with the current release of Virtual GPU Manager in either of the following situations:

- ▶ The guest driver is from a release in a branch two or more major releases before the current release, for example release 9.4.

In this situation, the Red Hat Enterprise Linux with KVM VM's `/var/log/messages` log file reports the following error:

```
vmiop_log: (0x0): Incompatible Guest/Host drivers: Guest VGX version is older than the minimum version supported by the Host. Disabling vGPU.
```

- ▶ The guest driver is from a later release than the Virtual GPU Manager.

In this situation, the Red Hat Enterprise Linux with KVM VM's `/var/log/messages` log file reports the following error:

```
vmiop_log: (0x0): Incompatible Guest/Host drivers: Guest VGX version is newer than the maximum version supported by the Host. Disabling vGPU.
```

In either situation, the VM boots in standard VGA mode with reduced resolution and color depth. The NVIDIA virtual GPU is present in **Windows Device Manager** but displays a warning sign, and the following device status:

```
Windows has stopped this device because it has reported problems. (Code 43)
```

Resolution

Install a release of the NVIDIA guest VM driver that is compatible with current release of Virtual GPU Manager.

3.9. Single vGPU benchmark scores are lower than pass-through GPU

Description

A single vGPU configured on a physical GPU produces lower benchmark scores than the physical GPU run in pass-through mode.

Aside from performance differences that may be attributed to a vGPU's smaller frame buffer size, vGPU incorporates a performance balancing feature known as Frame Rate Limiter (FRL). On vGPUs that use the best-effort scheduler, FRL is enabled. On vGPUs that use the fixed share or equal share scheduler, FRL is disabled.

FRL is used to ensure balanced performance across multiple vGPUs that are resident on the same physical GPU. The FRL setting is designed to give good interactive remote graphics experience but may reduce scores in benchmarks that depend on measuring frame rendering rates, as compared to the same benchmarks running on a pass-through GPU.

Resolution

FRL is controlled by an internal vGPU setting. On vGPUs that use the best-effort scheduler, NVIDIA does not validate vGPU with FRL disabled, but for validation of benchmark performance, FRL can be temporarily disabled by setting `frame_rate_limiter=0` in the vGPU configuration file.

```
# echo "frame_rate_limiter=0" > /sys/bus/mdev/devices/vgpu-id/nvidia/vgpu_params
```

For example:

```
# echo "frame_rate_limiter=0" > /sys/bus/mdev/devices/aa618089-8b16-4d01-a136-25a0f3c73123/nvidia/vgpu_params
```

The setting takes effect the next time any VM using the given vGPU type is started.

With this setting in place, the VM's vGPU will run without any frame rate limit.

The FRL can be reverted back to its default setting as follows:

1. Clear all parameter settings in the vGPU configuration file.

```
# echo " " > /sys/bus/mdev/devices/vgpu-id/nvidia/vgpu_params
```

Note: You cannot clear specific parameter settings. If your vGPU configuration file contains other parameter settings that you want to keep, you must reinstate them in the next step.

2. Set `frame_rate_limiter=1` in the vGPU configuration file.

```
# echo "frame_rate_limiter=1" > /sys/bus/mdev/devices/vgpu-id/nvidia/vgpu_params
```

If you need to reinstate other parameter settings, include them in the command to set `frame_rate_limiter=1`. For example:

```
# echo "frame_rate_limiter=1 disable_vnc=1" > /sys/bus/mdev/devices/aa618089-8b16-4d01-a136-25a0f3c73123/nvidia/vgpu_params
```

3.10. `nvidia-smi` fails to operate when all GPUs are assigned to GPU pass-through mode

Description

If all GPUs in the platform are assigned to VMs in pass-through mode, `nvidia-smi` will return an error:

```
[root@vgx-test ~]# nvidia-smi
Failed to initialize NVML: Unknown Error
```

This is because GPUs operating in pass-through mode are not visible to `nvidia-smi` and the NVIDIA kernel driver operating in the Red Hat Enterprise Linux with KVM host.

To confirm that all GPUs are operating in pass-through mode, confirm that the `vfio-pci` kernel driver is handling each device.

```
# lspci -s 05:00.0 -k
05:00.0 VGA compatible controller: NVIDIA Corporation GM204GL [Tesla M60] (rev a1)
Subsystem: NVIDIA Corporation Device 113a
Kernel driver in use: vfio-pci
```

Resolution

N/A

Chapter 4. Resolved Issues

Only resolved issues that have been previously noted as known issues or had a noticeable user impact are listed. The summary and description for each resolved issue indicate the effect of the issue on NVIDIA vGPU software **before the issue was resolved**.

Issues Resolved in Release 12.2

Bug ID	Summary and Description
3184762	<p><u>12.0, 12.1 Only: Rebooting a Windows 10 vGPU VM causes a host crash</u></p> <p>When a Windows 10 VM that is configured with NVIDIA vGPU is rebooted, the hypervisor host crashes. This issue is caused by the failure of the Virtual GPU Manger to honor a particular notifier request from the kernel, which causes the kernel to crash.</p>

Issues Resolved in Release 12.1

Bug ID	Summary and Description
3230997	<p><u>12.0 Only: Sessions freeze when Adobe Premiere with the Adobe Mercury Engine is used</u></p> <p>Sessions freeze when Adobe Premiere with the Adobe Mercury Engine is used. The session can freeze after 15-20 minutes of use or when a project is being exported.</p>
3225521	<p><u>12.0 Only: Issues occur when Blackmagic Design DaVinci Resolve is used</u></p> <p>Multiple issues, such as application crashes, application instability, and session freezes, occur when Blackmagic Design DaVinci Resolve is used. CUDA error 702 might also be observed.</p>

Issues Resolved in Release 12.0

No resolved issues are reported in this release for Red Hat Enterprise Linux with KVM.

Chapter 5. Known Issues

5.1. 12.0 Only: Sessions freeze when Adobe Premiere with the Adobe Mercury Engine is used

Description

Sessions freeze when Adobe Premiere with the Adobe Mercury Engine is used. The session can freeze after 15-20 minutes of use or when a project is being exported.

Workaround

Status

Resolved in NVIDIA vGPU software 12.1

Ref.

3230997

5.2. 12.0 Only: Issues occur when Blackmagic Design DaVinci Resolve is used

Description

Multiple issues, such as application crashes, application instability, and session freezes, occur when Blackmagic Design DaVinci Resolve is used. CUDA error 702 might also be observed.

Status

Resolved in NVIDIA vGPU software 12.1

Ref.

3225521

5.3. 12.0, 12.1 Only: Rebooting a Windows 10 vGPU VM causes a host crash

Description

When a Windows 10 VM that is configured with NVIDIA vGPU is rebooted, the hypervisor host crashes. This issue is caused by the failure of the Virtual GPU Manger to honor a particular notifier request from the kernel, which causes the kernel to crash.

Status

Resolved in NVIDIA vGPU software 12.2.

Ref.

3184762

5.4. NVIDIA A100 HGX 80GB vGPU names shown as Graphics Device by nvidia-smi

Description

The names of vGPUs that reside on the NVIDIA A100 80GB GPU are incorrectly shown as Graphics Device by the `nvidia-smi` command. The correct names indicate the vGPU type, for example, A100DX-40C.

5.5. Idle Teradici Cloud Access Software session disconnects from Linux VM

Description

After a Teradici Cloud Access Software session has been idle for a short period of time, the session disconnects from the VM. When this issue occurs, the error messages `NVOS status 0x19` and `vGPU Message 21 failed` are written to the log files on the hypervisor host. This issue affects only Linux guest VMs.

Status

Open

Ref.

200689126

5.6. GPU Operator doesn't support vGPU on GPUs based on architectures before NVIDIA Turing

Description

NVIDIA GPU Operator doesn't support vGPU deployments on GPUs based on architectures before the NVIDIA Turing™ architecture. This issue is caused by the omission of version information for the vGPU manager from the configuration information that GPU Operator requires. Without this information, GPU Operator does not deploy the NVIDIA driver container because the container cannot determine if the driver is compatible with the vGPU manager.

Status

Open

Ref.

3227576

5.7. Idle NVIDIA A100, NVIDIA A40, and NVIDIA A10 GPUs show 100% GPU utilization

Description

The `nvidia-smi` command shows 100% GPU utilization for NVIDIA A100, NVIDIA A40, and NVIDIA A10 GPUs even if no vGPUs have been configured or no VMs are running. A GPU is affected by this issue only if the `sriov-manage` script has **not** been run to enable the virtual function for the GPU in the `sysfs` file system.

```
[root@host ~]# nvidia-smi
Fri Apr 23 11:45:28 2021
```

NVIDIA-SMI 460.73.02 Driver Version: 460.73.02 CUDA Version: 11.2									

GPU	Name	Persistence-M	Bus-Id	Disp.A	Volatile	Uncorr.	ECC		
Fan	Temp	Perf	Pwr:Usage/Cap	Memory-Usage	GPU-Util	Compute M.	MIG	M.	

0	A100-PCIE-40GB	On	00000000:5E:00.0	Off					0
N/A	50C	P0	97W / 250W	0MiB / 40537MiB	100%	Default			Disabled

```

+-----+
| Processes:                                     |
| GPU  GI  CI          PID  Type  Process name          GPU Memory |
|   ID  ID  ID                   Type  Process name          Usage     |
+-----+
| No running processes found                   |
+-----+

```

Workaround

Run the `sriov-manage` script to enable the virtual function for the GPU in the `sysfs` file system as explained in [Virtual GPU Software User Guide](#).

After this workaround has been completed, the `nvidia-smi` command shows 0% GPU utilization for affected GPUs when they are idle.

```

root@host ~]# nvidia-smi

5.8. Guest VM frame buffer listed by `nvidia-smi` for vGPUs on GPUs that support SRIOV is incorrect

Description

The amount of frame buffer listed in a guest VM by the `nvidia-smi` command for vGPUs on GPUs that support Single Root I/O Virtualization (SR-IOV) is incorrect. Specifically, the amount

of frame buffer listed is the amount of frame buffer allocated for the vGPU type minus the size of the VMMU segment (`vmmu_page_size`). Examples of GPUs that support SRIOV are GPUs based on the NVIDIA Ampere architecture, such as NVIDIA A100 PCIe 40GB or NVIDIA A100 HGX 40GB.

For example, frame buffer for -4C and -20C vGPU types is listed as follows:

- ▶ For -4C vGPU types, frame buffer is listed as 3963 MB instead of 4096 MB.
- ▶ For -20C vGPU types, frame buffer is listed as 20347 MB instead of 20480 MB.

5.9. VMs fail to boot on RHV 4.4

Description

On RHV 4.4, VMs fail to boot with the error `Host doesn't support passthru of host PCI device`. This issue affects GPU pass through deployments with all supported GPUs and NVIDIA vGPU deployments with GPUs based on the NVIDIA Ampere architecture. This issue occurs because the `intel_iommu` parameter and the `nouveau.modeset` parameter are not set correctly.

Version

This issue affects RHV 4.4.

Workaround

Perform this workaround on the hypervisor host. This workaround requires root user privileges on the hypervisor host.

1. In a plain-text editor, edit the file `/boot/loader/entries/rhvh-4.4.1.1-0.20200722.0+1-4.18.0-193.13.2.e18_2.x86_64.conf` to add the following options to the boot options.

- ▶ `nouveau.modeset=0`
- ▶ `intel_iommu=on`

Note: Line breaks have been added to this example to enhance readability.

```
title rhvh-4.4.1.1-0.20200722.0 (4.18.0-193.13.2.e18_2.x86_64)
```

```

5.10. Driver upgrade in a Linux guest VM with multiple vGPUs might fail

Description

Upgrading the NVIDIA vGPU software graphics driver in a Linux guest VM with multiple vGPUs might fail. This issue occurs if the driver is upgraded by overinstalling the new release of the driver on the current release of the driver while the `nvidia-gridd` service is running in the VM.

Workaround

1. Stop the `nvidia-gridd` service.
2. Try again to upgrade the driver.

200627445

5.13. On Linux, the frame rate might drop to 1 after several minutes

Description

On Linux, the frame rate might drop to 1 frame per second (FPS) after NVIDIA vGPU software has been running for several minutes. Only some applications are affected, for example, `glxgears`. Other applications, such as Unigine Heaven, are not affected. This behavior occurs because Display Power Management Signaling (DPMS) for the Xorg server is enabled by default and the display is detected to be inactive even when the application is running. When DPMS is enabled, it enables power saving behavior of the display after several minutes of inactivity by setting the frame rate to 1 FPS.

Workaround

1. If necessary, stop the Xorg server.

```
# /etc/init.d/xorg stop
```

2. In a plain text editor, edit the `/etc/X11/xorg.conf` file to set the options to disable DPMS and disable the screen saver.

- a). In the `Monitor` section, set the `DPMS` option to `false`.

```
Option "DPMS" "false"
```

- b). At the end of the file, add a `ServerFlags` section that contains option to disable the screen saver.

```
Section "ServerFlags"
    Option "BlankTime" "0"
EndSection
```

- c). Save your changes to `/etc/X11/xorg.conf` file and quit the editor.

3. Start the Xorg server.

```
# etc/init.d/xorg start
```

5.14. DWM crashes randomly occur in Windows VMs

Description

Desktop Windows Manager (DWM) crashes randomly occur in Windows VMs, causing a blue-screen crash and the bug check `CRITICAL_PROCESS_DIED`. Computer Management shows problems with the primary display device.

Version

This issue affects Windows 10 1809, 1903 and 1909 VMs.

Status

Not an NVIDIA bug

Ref.

2730037

5.15. Publisher not verified warning during Windows 7 driver installation

Description

During installation of the NVIDIA vGPU software graphics driver for Windows on Windows 7, Windows warns that it can't verify the publisher of the driver software. If **Device Manager** is used to install the driver, **Device Manager** warns that the driver is not digitally signed. If you install the driver, error 52 (`CM_PROB_UNSIGNED_DRIVER`) occurs.

This issue occurs because Microsoft is no longer dual signing WHQL-tested software binary files by using the SHA-1 and SHA-2 hash algorithms. Instead, WHQL-tested software binary files are signed only by using the SHA-2 hash algorithm. All NVIDIA vGPU software graphics drivers for Windows are WHQL tested.

By default, Windows 7 systems cannot recognize signatures that were created by using the SHA-2 hash algorithm. As a result, software binary files that are signed only by using the SHA-2 hash algorithm are considered unsigned.

For more information, see [2019 SHA-2 Code Signing Support requirement for Windows and WSUS](#) on the Microsoft Windows support website.

Version

Windows 7

Workaround

If you experience this issue, install the following updates and restart the VM or host before installing the driver:

- ▶ Servicing stack update (SSU) ([KB4490628](#))
- ▶ SHA-2 update ([KB4474419](#))

Status

2642134

5.17. ECC memory settings for a vGPU cannot be changed by using NVIDIA X Server Settings

Description

The ECC memory settings for a vGPU cannot be changed from a Linux guest VM by using **NVIDIA X Server Settings**. After the ECC memory state has been changed on the **ECC Settings** page and the VM has been rebooted, the ECC memory state remains unchanged.

Workaround

Use the `nvidia-smi` command in the guest VM to enable or disable ECC memory for the vGPU as explained in [Virtual GPU Software User Guide](#).

If the ECC memory state remains unchanged even after you use the `nvidia-smi` command to change it, use the workaround in [Changes to ECC memory settings for a Linux vGPU VM by `nvidia-smi` might be ignored](#).

Status

Open

Ref.

200523086

5.18. Changes to ECC memory settings for a Linux vGPU VM by `nvidia-smi` might be ignored

Description

After the ECC memory state for a Linux vGPU VM has been changed by using the `nvidia-smi` command and the VM has been rebooted, the ECC memory state might remain unchanged.

This issue occurs when multiple NVIDIA configuration files in the system cause the kernel module option for setting the ECC memory state `RMGuestECCState` in `/etc/modprobe.d/nvidia.conf` to be ignored.

When the `nvidia-smi` command is used to enable ECC memory, the file `/etc/modprobe.d/nvidia.conf` is created or updated to set the kernel module option `RMGuestECCState`. Another configuration file in `/etc/modprobe.d/` that contains the keyword `NVreg_RegistryDwordsPerDevice` might cause the kernel module option `RMGuestECCState` to be ignored.

Workaround

This workaround requires administrator privileges.

1. Move the entry containing the keyword `NVreg_RegistryDwordsPerDevice` from the other configuration file to `/etc/modprobe.d/nvidia.conf`.
2. Reboot the VM.

5.21. Frame capture while the interactive logon message is displayed returns blank screen

Description

Because of a known limitation with NvFBC, a frame capture while the interactive logon message is displayed returns a blank screen.

An NvFBC session can capture screen updates that occur after the session is created. Before the logon message appears, there is no screen update after the message is shown and, therefore, a black screen is returned instead. If the NvFBC session is created after this update has occurred, NvFBC cannot get a frame to capture.

Workaround

Press **Enter** or wait for the screen to update for NvFBC to capture the frame.

Status

Not a bug

Ref.

2115733

5.22. RDS sessions do not use the GPU with some Microsoft Windows Server releases

Description

When some releases of Windows Server are used as a guest OS, Remote Desktop Services (RDS) sessions do not use the GPU. With these releases, the RDS sessions by default use the Microsoft Basic Render Driver instead of the GPU. This default setting enables 2D DirectX applications such as Microsoft Office to use software rendering, which can be more efficient than using the GPU for rendering. However, as a result, 3D applications that use DirectX are prevented from using the GPU.

Version

- ▶ Windows Server 2019
- ▶ Windows Server 2016
- ▶ Windows Server 2012

Solution

Change the local computer policy to use the hardware graphics adapter for all RDS sessions.

1. Choose **Local Computer Policy > Computer Configuration > Administrative Templates > Windows Components > Remote Desktop Services > Remote Desktop Session Host > Remote Session Environment** .
2. Set the **Use the hardware default graphics adapter for all Remote Desktop Services sessions** option.

5.23. When the scheduling policy is fixed share, GPU utilization is reported as higher than expected

Description

When the scheduling policy is fixed share, GPU engine utilization can be reported as higher than expected for a vGPU.

For example, GPU engine usage for six P40-4Q vGPUs on a Tesla P40 GPU might be reported as follows:

```
[root@localhost:~] nvidia-smi vgpu
Mon Aug 20 10:33:18 2018
+-----+-----+
| NVIDIA-SMI 390.42                Driver Version: 390.42                |
+-----+-----+
| GPU   Name                               Bus-Id                               GPU-Util |
| vGPU ID   Name                           VM ID   VM Name                               vGPU-Util |
+-----+-----+
| 0   Tesla P40                               00000000:81:00.0                       99%      |
|   85109   GRID P40-4Q | 85110   win7-xmpl-146048-1 | 32%    |
|   87195   GRID P40-4Q | 87196   win7-xmpl-146048-2 | 39%    |
|   88095   GRID P40-4Q | 88096   win7-xmpl-146048-3 | 26%    |
|   89170   GRID P40-4Q | 89171   win7-xmpl-146048-4 | 0%      |
|   90475   GRID P40-4Q | 90476   win7-xmpl-146048-5 | 0%      |
|   93363   GRID P40-4Q | 93364   win7-xmpl-146048-6 | 0%      |
+-----+-----+
| 1   Tesla P40                               00000000:85:00.0                       0%      |
+-----+-----+
```

The vGPU utilization of vGPU 85109 is reported as 32%. For vGPU 87195, vGPU utilization is reported as 39%. And for 88095, it is reported as 26%. However, the expected vGPU utilization of any vGPU should not exceed approximately 16.7%.

This behavior is a result of the mechanism that is used to measure GPU engine utilization.

5.29. No Manage License option available in NVIDIA X Server Settings by default

Description

By default, the **Manage License** option is not available in **NVIDIA X Server Settings**. This option is missing because the GUI for licensing on Linux is disabled by default to work around the

issue that is described in [A segmentation fault in Dbus code causes nvidia-gridd to exit on Red Hat Enterprise Linux and CentOS](#).

Workaround

This workaround requires sudo privileges.

Note: Do not use this workaround with Red Hat Enterprise Linux 6.8 and 6.9 or CentOS 6.8 and 6.9. To prevent a segmentation fault in Dbus code from causing the `nvidia-gridd` service from exiting, the GUI for licensing must be disabled with these OS versions.

If you are licensing a physical GPU for vCS, you **must** use the configuration file `/etc/nvidia/gridd.conf`.

1. If **NVIDIA X Server Settings** is running, shut it down.
2. If the `/etc/nvidia/gridd.conf` file does not already exist, create it by copying the supplied template file `/etc/nvidia/gridd.conf.template`.
3. As root, edit the `/etc/nvidia/gridd.conf` file to set the `EnableUI` option to `TRUE`.
4. Start the `nvidia-gridd` service.

```
# sudo service nvidia-gridd start
```

When **NVIDIA X Server Settings** is restarted, the **Manage License** option is now available.

Status

Open

5.30. Licenses remain checked out when VMs are forcibly powered off

Description

NVIDIA vGPU software licenses remain checked out on the license server when non-persistent VMs are forcibly powered off.

The NVIDIA service running in a VM returns checked out licenses when the VM is shut down. In environments where non-persistent licensed VMs are not cleanly shut down, licenses on the license server can become exhausted. For example, this issue can occur in automated test environments where VMs are frequently changing and are not guaranteed to be cleanly shut down. The licenses from such VMs remain checked out against their MAC address for seven days before they time out and become available to other VMs.

Resolution

If VMs are routinely being powered off without clean shutdown in your environment, you can avoid this issue by shortening the license borrow period. To shorten the license borrow period, set the `LicenseInterval` configuration setting in your VM image. For details, refer to [Virtual GPU Client Licensing User Guide](#).

Status

Closed

1694975

5.31. VM bug checks after the guest VM driver for Windows 10 RS2 is installed

Description

When the VM is rebooted after the guest VM driver for Windows 10 RS2 is installed, the VM bug checks. When Windows boots, it selects one of the standard supported video modes. If Windows is booted directly with a display that is driven by an NVIDIA driver, for example a vGPU on Citrix Hypervisor, a blue screen crash occurs.

This issue occurs when the screen resolution is switched from VGA mode to a resolution that is higher than 1920×1200.

Fix

Download and install [Microsoft Windows Update KB4020102](#) from the Microsoft Update Catalog.

Workaround

If you have applied the fix, ignore this workaround.

Otherwise, you can work around this issue until you are able to apply the fix by not using resolutions higher than 1920×1200.

1. Choose a GPU profile in Citrix XenCenter that does not allow resolutions higher than 1920×1200.
2. Before rebooting the VM, set the display resolution to 1920×1200 or lower.

Status
